

Encouraging Cables and Larger Export Buying  
the Chief Influences—Corn Higher in  
Unsatisfactory Weather.

offerings, prices finally rising sharply as supplies became smaller, while demand increased. The market for grain, however, for the decline showing anxiety to cover, prompted partly by continued hot and dry weather in the West and more definite reports respecting crop deterioration. Numerous reports came in that corn had been killed in many instances, and hence many stalks were almost devoid of ears. In other cases the ears were found to be stunted. Therefore it is feared that the next report will show a still lower condition. The monthly report, issued on Monday, was decidedly unsatisfactory, the condition being 79.3, against 84.4 on July 1, indicating a loss of 5.1 percent, or 88,000 bushels, which suggests a loss of 16,000,000 bushels in one month. In view of this shortage it was small wonder that farmers refused current bids, and it is deemed that they will hold back a large part of their crop. The final crop outcome can be determined with a reasonable degree of certainty.

Cotton Market Dominated by Climatic Conditions, Particularly as They Bear on the Texas Crop.

whole, there seems to be a healthy tone, with indications of well sustained prices. A very large number of buyers are in the city from all parts of the country. It is admitted that a holding to high prices may check business, but it is believed that the process of readjustment has been advanced to a point where the manufacturer can see a small profit, even with the high cost of raw materials. This, it is claimed, would mean more ready buying of cotton by mills.

New Orleans, La., August 14.—The week to come in the cotton market. It is expected that the bulk of the new crop operations in the old crop. It is generally understood by the trade that the bulk of the new crop operations will be issued in the New York market Monday morning.

The market is of quite a large element in the market that the very heavy purchases of new crop cotton in the New York market have been made. It is expected that the bulk of the new crop operations will be issued in the New York market Monday morning.

The market is of quite a large element in the market that the very heavy purchases of new crop cotton in the New York market have been made. It is expected that the bulk of the new crop operations will be issued in the New York market Monday morning.

new crop cotton will be added to the load of actual cotton that the bulls are already carrying. Outside of this, the weather in Texas will continue to be the main feature of interest in the market. This question is getting to be very complex, and it is growing difficult to say what effect any sort of weather in Texas will have on the market immediately. Rain is still needed, according to the opinion of many, and it is probable if the rains predicted for over Sunday materialize the

Should it develop that much of the recent buying of spots in Texas has been for the account of mills, instead of for the account of the live cattle market, it is likely that foreign mills will enter the market. Another feature of the situation that will be watched is the parity between New Orleans and Liverpool. It is expected that the market will be wide enough to allow a large business for foreign accounts. It must be remembered that Liverpool's stock is now only 350,000 bales on Friday, while New Orleans has 1,000,000 bales, and that the foreign merchants must buy over 600,000 bales, to say nothing about what they must purchase to meet the current re-

New York, August 14.—The recovery in the stock market continued last week, although losing some of its force as prices got further away from the point at which the fall was almost certain. The extensive covering of short contracts which was going on had the effect of reducing the demand, and other influences worked automatically to reduce the demand.

Some of the events accompanying the two weeks recovery which were unfavorable in themselves were to be reckoned with in the estimation of the previous decline. Such was the government reports on condition of cotton, the grain crops, which confirmed the forecasts developed from the earlier promise. The more immediate factors of weather conditions were favorable to some improvement on the averages contained in the government report, thus adding to the recovery. To cover the shorts, which had been put on the assumption of crop damage. The decided shrinkage from the earlier estimates of the yield of the most important crops—cotton, corn and wheat—occurred for consideration in the summing up in the general prospect. The recovery in American raw materials and an export surplus to cover the unfavorable foreign trade balance, and the likelihood of its disappointment, were forced into view by the statistics of the July foreign trade which the severe decrease in exports of

Immediate factors of weather conditions were favorable to some improvement on the averages contained in the government report, thus adding to the margin to cover the shorts, which had been put out on the assumption of crop damage. The decided shrinkage from the earlier estimates was due to the fact that most important crops—cotton, corn and wheat—occurred for consideration in the summing up in the general prospect. The weather was generally favorable, the water supply was abundant, the harvest was good and an exportable surplus to cover the unfavorable foreign trade balance, and the likelihood of its disappointment was forced into attention by the statistics of the July foreign trade, which the severe decrease in exports of

Expected That Not One Republican Candidate Will Be Elected to Congress

into New York bank reserves. The fact that these conditions have not altered the conservative attitude of New York bankers toward the lower, especially on time, and the little demand for mercantile paper, argues for continuing attention for the suggestion of an open market for the fall money market. The persistent stagnation of the bond market, the fact that the export trade is plus is another item showing the spirit of caution still prevalent.

The metal trades were conspicuous for a lack of activity. The publication of the copper producers' monthly statistics and the newly inaugurated monthly statement of tonnage for the steel industry by the United States Steel Corporation. The reduced output of copper was satisfactory, but the probable influence of trade conditions on the steel market intervened as a factor. The fall in output of steel for the steel industry was a factor. The fall in output of steel for the steel industry was a factor. The fall in output of steel for the steel industry was a factor.

The attack of the Regulars on Norris is not being made with a brass band accompaniment, but it is being waged with great fierceness, for all its secrecy. At the head of the Regulars in the fight against Norris is Senator Charles McNary, of Oregon, who is throwing against Norris all the power of the Republican machine which he has taken ten years to build. This machine is well oiled and is making very little noise, but its effect will probably be the defeat of Norris. Norris revolted against the Regulars in Congress, and now the Regulars are using all their power to defeat their enemy, not by the aid of the brass band, but by the aid of the

legitimacy of large increases in the expenses of the railroads. This herald of coming hearings over proposed rate advances affects speculative sentiment unfavorably.

Insurgency is yielding great influence in the race for United States Senate seats. In Nebraska, the Oregon plan of selecting a Senator is in vogue, thus enabling an Insurgent to vote against "Stand-Pat" Senator Burkett and yet cast his vote for the Republican State legislator. There is an Insurgent Insurgent candidate for United States Senator, C. O. Whedon, but he will be eliminated at the primaries. The Insurgents are not sufficiently numerous in Nebraska to elect their candidate, although they may hold the balance of power in elect-

land county, has determined to convert a part of his land into a model experimental agricultural station. He expected the aid and co-operation of the Department of Agriculture. An agricultural meeting will be held on Wednesday, May 27, at the suggestion of the county and where Governor Mann, Professor O. B. March, of the United States Agricultural Bureau, and T. O. Sandy, agent of the United States Department of Agriculture will deliver addresses.

Reports from the fish factories along the Rappahannock and the Great Wicomico indicate that the catch of menhaden for the last two or three weeks has been small and the quality of the fish rather poor, especially in regard to oil, which is the most valuable by-product of the menhaden factories. The season for fish fishing will soon begin, when it is hoped better success will fall to the lot of the fishermen.

Some of the tomato canning establishments in this section have begun

ably be elected. William J. Bryan has taken very little part in the campaign. Immediately after his county option platform was thrown out of the Democratic convention Mr. Bryan delivered a lecture tour in the Western States, and he has been warmly received. He has issued one statement saying that only those candidates for the Legislature and for Governor who will pledge themselves to the county option should be supported. Nationally, Mr. Bryan says it matters not whether the candidates for Congress and the Senate are or are not county optionists. If Bryan intends taking part in the Nebraska campaign he evidently means to wait until after the primaries to come to give his support to the nonness.

But with or without Bryan, everything seems to favor the Democratic party in Nebraska this year, and the probabilities are that not a single Republican will be sent to Washington from this State.

ing fairly good prices for the remnant of their early crop, which is now being used up. The low prices prevailing last year and several disastrous failures in the canning business have caused the farmers of this region to turn to the growing of tomatoes planted in tomatoes. The regular crop for canning will be gathered about the first of September.

News from the neighborhood of Coan Wharf, in Northumberland county, of the death of John Sisson, a prominent business man, is of interest in this place. He had been ill for a long time, and was about fifty years of age, and was a thoroughly principled man. He was a member of the Pennsylvania State Agricultural High School, is visiting his brother-in-law, R. M. Sanderson, of this city.

John Sisson was the son of the late State Senator Cochran, of Pennsylvania, who owns the fine old colonial estate of "Rosegill."

John Sisson, a native of Baltimore, came to this home of Ralph Worme, brought down from Baltimore last

**Crop Summary.**—The following crop summary will be published by the Commercial-Appeal to-morrow:

For three successive weeks cotton has improved in the States East of the Mississippi River, and the prospects for a good crop are good. The crop is late, and would be seriously damaged by an early frost, while frost later than usual is needed to allow the fullest promise to be matured. The bolls have grown very rapidly, and is attaining fair size. It is setting bolls quite satisfactorily, and the farm tone is decidedly more

peaches and plums as well during the past week were beneficial. They were local in many sections, however, and the orchards are depending on the rains to be benefited by general precipitation. Even in the earliest sections of this Eastern belt, there is very little movement to market will be delayed well into September, unless drought later on should befall. The boll weevils in Louisiana and Mississippi, and are doing more harm than was earlier anticipated. The boll weevils are doing more harm in the Red River counties, and the crop lost ground steadily. The cotton crop is being matured and is being rapidly in southern and southwestern counties, and is being rushed to market as fast as possible by the farmers. In the past few years there has been a rapid expansion in cotton growing; the crop is almost everywhere beyond repair, but good crops are still in the northern

week a number of children and gave them a delightful outing on his farm. Some of the children had never seen a pig before, and the trip proved the most delightful event of their lives.

The venerable Dr. Thomas S. Dunaway, one of the most distinguished Baptist preachers of Virginia, for nearly forty years pastor of the Fredericksburg Baptist Church, is visiting relatives and friends in Lancaster, which is his native county. Though he is now in his ninety-fourth year, he is as vigorous as a man of twenty years ago. It is expected that he will while in this county preach at Lebanon Baptist Church, where he was, as a young man, ordained to the ministry. 800.

Misses Stella and Lucy Withers, of Rustburg, Campbell county, are visiting here, and intend to stay a few days.

The Rev. Thomas S. Dunaway, Jr., pastor of the Smithfield Baptist Church, with his family, is visiting his parents' home near here. He is the son of the Rev. Dr. Wayland F. Dunaway, who represented Lancaster in the Constitutional Convention of 1861-1862.

It is reported that the corn is beginning to fall here for the past four weeks, broken temporarily by occasional showers here and there, threatens to be a very bad year for the other growing crops. The prevalent belief that the camp meeting season always brings rain to this section has thus far not been proved correct. In other growing sections the corn is doing well this year. In some sections the grass is parching up and the corn blades are beginning to twist.
